Summary

Developer-tooling engineer and daily Claude Code power user who builds — and writes about — multi-agent systems on Claude. Creator and maintainer of CAST, an open-source, local-first 23-agent framework for Claude Code with hook-driven dispatch, model-aware routing, and SQLite observability, distributed as 13 Homebrew taps plus the umbrella cast formula. Ships and maintains production web applications serving 4,200+ users across 900+ Ohio school districts. Equally comfortable deep in agent-orchestration internals and explaining them clearly to other developers.

Skills

- **AI & agent systems:** Claude API, Claude Code, agent architecture & orchestration, MCP (Model Context Protocol), hook-driven dispatch, model-aware routing, RAG / embeddings (FTS5), Ollama, local-first observability
- **Languages & frameworks:** TypeScript, Python, Rust, Bash, Node.js, React 19, Express 5, Vite 8, Tauri v2, Flask, Textual
- **Frontend:** Tailwind CSS, Framer Motion, TanStack Query, React Router, Zustand, Radix / shadcn/ui, AG Grid, xterm.js, cmdk
- **Data & infrastructure:** SQLite, PostgreSQL, MongoDB, BigQuery, Docker / Compose, Traefik, Jenkins, Git, CI/CD
- **Testing:** Vitest, BATS (1,185 shell tests), Playwright, Supertest, React Testing Library
- **Developer advocacy:** technical writing (dev.to), open-source maintenance, Homebrew distribution, building in public

Open Source — AI Developer Tooling

Creator & Maintainer

2024 — Present

- **CAST (Claude Agent Specialist Team) v7.4.1** — Designed and maintain a local-first, open-source multi-agent framework for Claude Code: 23 specialist agents, hook-driven dispatch, model-aware routing (Sonnet for complex work, Haiku for lightweight/review), per-agent persistent memory with FTS5 search, and local SQLite observability. 19 slash commands, 16 skills, 1,185 BATS tests, zero cloud dependencies.
- **CAST ecosystem (13 Homebrew taps plus the umbrella cast formula)** — Architected a modular distribution strategy — cast-agents, cast-hooks, cast-observe, cast-security, cast-dash, cast-memory, cast-parallel, cast-routines, cast-doctor, Claude's Journal, and more — each with its own tap, versioned releases, and standalone functionality.
- **Claude Code Dashboard** — Built a 10-page real-time observability UI (React 19 + TypeScript + Express 5 + SSE) with session cost tracking, per-agent scorecards, a Cmd+K command palette, and privacy auditing.
- **CAST v8 (Desktop)** — Bundling the dashboard, a terminal pane, and voice into a double-click Tauri installer so the agent runtime is watchable, not inferrable (in progress).
- **cast-dash** — Built an htop-style Python TUI (Textual) for terminal-native CAST monitoring with a 4-panel live display.
- **Writing** — Publish developer-facing patterns on dev.to, e.g. "Git Worktrees + Headless AI Sessions: A Pattern for Parallel Code Generation."

Professional Experience

Application Developer • META Solutions — Columbus, OH

Aug 2022 — Present

- Spearheaded CrossCheck's complete migration from AngularJS to React — a mission-critical EMIS validation platform (AG Grid, JWT auth, TanStack Query) now serving 4,200+ users across 900+ Ohio school districts.
- Architected and maintain five production web applications across React, Flask, Express, and PostgreSQL serving Ohio's K-12 education ecosystem.

- Built SES-Wiki from the ground up — a React 19 + Express 5 EMIS scenario reference tool with JSON persistence, automated backups, and comprehensive Vitest coverage.
- Launched the Customization Web Store — an internal React 19 + Vite platform replacing a manual, email-based PowerSchool customization-request workflow.
- Modernized the E-Rate dashboard into a Docker Compose monorepo — dual React frontends, a Flask REST API with PostgreSQL, Traefik reverse proxy, and Jenkins CI/CD.

Education

- Full Stack Web Development Certificate — The Ohio State University · 2022
- Bachelor of Arts & Science, Geological Science — Ohio University · 2005–2009
