PORTFOLIO — THE CAST ECOSYSTEM

An open-source, local-first multi-agent control plane for Claude Code — built, shipped, and maintained in public.

v9.5.3 CAST version	27 specialist agents	9 packages	21 slash commands	17 skills	2,389 tests	39 table record
-------------------------------	--------------------------------	----------------------	-----------------------------	---------------------	-----------------------	---------------------------

WHAT I BUILD

CAST (Claude Agent Specialist Team) — 27 specialist agents with hook-driven dispatch, model-aware routing, hook-enforced quality gates, and per-agent persistent memory. v9 "The Record That Acts": the 39-table SQLite execution record is searchable (cast ask), signed (cast ledger --verify), and predictive (cast predict). Zero cloud dependencies.

Cast Desktop — native Tauri 2 + React 19 + Rust app; embedded Express 5 + SQLite backend, 11 dashboard views, real PTY terminal. Shipped v1.2.12.

Claude Code Dashboard v2.7.0 — React 19 + TypeScript + Express 5 + SSE observability UI; 8 pages, reads ~/.claude directly, no telemetry.

Agent-reliability tools (zero-LLM, deterministic) — misfire v0.2.0: trace-grounded CLAUDE.md adherence auditor; attest v0.3.0: verifies a subagent's DONE against the real git delta; looptrip v0.1.2: trips coordination loops at iteration 2 — reproduces prevented duplicate-work spend from a committed fixture.

WRITING & BUILDING IN PUBLIC

github.com/ek33450505 — open-source agent infrastructure, shipped in public.

DAY JOB — PRODUCTION TRACK RECORD

Applications Developer, META Solutions (2022–present). Led CrossCheck's AngularJS→React migration — an EMIS validation platform serving Ohio school districts — and more production apps (React, Flask, Express, PostgreSQL, MS SQL Server).
