Portfolio — The CAST Ecosystem

An open-source, local-first multi-agent framework for Claude Code — built, shipped, and maintained in public.

v7.3	23	16	19	16	1,325	10
CAST version	specialist agents	Homebrew packages	slash commands	skills	BATS tests	dashboard pages

What I build

CAST (Claude Agent Specialist Team) A 23-agent specialist team for Claude Code: hook-driven dispatch, model-aware routing (Sonnet for complex work, Haiku for review), per-agent persistent memory with FTS5 search, and local SQLite observability. Distributed as 16 Homebrew packages with versioned releases. Zero cloud dependencies.

Claude Code Dashboard A 10-page real-time observability UI (React 19 + TypeScript + Express 5 + SSE): session cost tracking, per-agent scorecards, a Cmd+K command palette, and privacy auditing — so the agent runtime is watchable, not inferred.

CAST v8 — Desktop Bundling the dashboard, a terminal pane, and voice into a double-click Tauri installer (in progress, ~90%).

cast-dash An htop-style Python TUI (Textual) for terminal-native CAST monitoring, with a 4-panel live display.

Writing & building in public

dev.to/edwardkubiak Developer-facing patterns from real systems, e.g. “Git Worktrees + Headless AI Sessions: A Pattern for Parallel Code Generation.”

Day job — production track record

Application Developer, META Solutions (2022–present) Led CrossCheck's AngularJS→React migration — an EMIS validation platform serving 4,200+ users across 900+ Ohio school districts — and architected four other production apps (React, Flask, Express, PostgreSQL, Docker, Jenkins) for the K-12 education ecosystem.
