PORTFOLIO — THE CAST ECOSYSTEM

An open-source, local-first multi-agent control plane for Claude Code — built, shipped, and maintained in public.

v9.0.0 CAST version	23 specialist agents	9 packages	21 slash commands	17 skills	2,068 tests	38 table record
-------------------------------	--------------------------------	----------------------	-----------------------------	---------------------	-----------------------	---------------------------

WHAT I BUILD

CAST (Claude Agent Specialist Team) — 23 specialist agents with hook-driven dispatch, model-aware routing, hook-enforced quality gates, and per-agent persistent memory. v9 "The Record That Acts": the 38-table SQLite execution record is searchable (cast ask), signed (cast ledger --verify), and predictive (cast predict). Zero cloud dependencies.

Cast Desktop — native Tauri 2 + React 19 + Rust app; embedded Express 5 + SQLite backend, 11 dashboard views, real PTY terminal. 1,222 tests. Shipped v1.2.12.

Claude Code Dashboard v2.5.0 — React 19 + TypeScript + Express 5 + SSE observability UI; 8 pages, reads ~/.claude directly, no telemetry.

Agent-reliability tools (zero-LLM, deterministic) — misfire v0.2.0: trace-grounded CLAUDE.md adherence auditor; attest v0.3.0: verifies a subagent's DONE against the real git delta (325 tests); looptrip v0.1.2: trips coordination loops at iteration 2 — reproduces \$792.96 of prevented spend from a committed fixture.

WRITING & BUILDING IN PUBLIC

dev.to/edwardkubiak — agent-infrastructure patterns from real systems.

DAY JOB — PRODUCTION TRACK RECORD

Applications Developer, META Solutions (2022–present). Led CrossCheck's AngularJS→React migration — an EMIS validation platform serving 4,200+ users across 900+ Ohio school districts — and four more production apps (React, Flask, Express, PostgreSQL, MS SQL Server).
