PORTFOLIO — THE CAST ECOSYSTEM

An open-source, local-first multi-agent control plane for Claude Code — built, shipped, and maintained in public.

v10.6.1	27	9	21	19	4,767	46
CAST VERSION	SPECIALIST AGENTS	PACKAGES	SLASH COMMANDS	SKILLS	TESTS	TABLE RECORD

WHAT I BUILD

CAST (Claude Agent Specialist Team) — 27 specialist agents with hook-driven dispatch, model-aware routing, hook-enforced quality gates, and per-agent persistent memory. v10.6.1: the 46-table SQLite execution record is searchable (cast ask), signed (cast ledger --verify), and predictive (cast predict), and every quality gate is mutation-tested against the defect it guards. 4,767 tests, zero cloud dependencies.

Compute Atlas v1.34.1 — an open, source-cited census of U.S. grid-scale compute: 2,724 facilities across 50 states, DC and 4 territories, 61.1 GW operational and ~491.9 GW planned — data centers, crypto mining, and the dedicated power generation built to feed them. Interactive MapLibre map, per-facility dossiers, open data plus a public JSON API, and an autonomous daily discovery pipeline that verifies its own sources. compute-atlas.com

Cast Desktop — native Tauri 2 + React 19 + Rust app; embedded Express 5 + SQLite backend, 11 dashboard views, real PTY terminal. Shipped v1.2.12.

Claude Code Dashboard v3.0.0 — React 19 + TypeScript + Express 5 + SSE observability UI; session cost tracking, per-agent scorecards, evals, reads ~/.claude directly, no telemetry.

Agent-reliability tools (zero-LLM, deterministic) — misfire v0.2.0: trace-grounded CLAUDE.md adherence auditor; attest v0.3.0: verifies a subagent's DONE against the real git delta; looptrip v0.1.2: trips coordination loops at iteration 2, reproducing prevented duplicate-work spend from a committed fixture.

BUILDING IN PUBLIC

github.com/ek33450505 — open-source agent infrastructure, shipped in public under MIT.

DAY JOB — PRODUCTION TRACK RECORD

Applications Developer, META Solutions (2022–present). Hired out of a full-stack certificate to rebuild **CrossCheck** — the EMIS validation platform Ohio school districts use — replacing an end-of-life AngularJS 1.x application, and sole author of 1,706 of its 1,728 commits as of September 2026. Also build SES-Wiki (in QA as a page of CrossCheck), the public PowerSchool catalog, and the E-Rate dashboard front end across React, Flask, PostgreSQL and MS SQL Server.
